

A contact fungicide for the control of powdery mildew in strawberries

- Specially formulated product containing potassium hydrogen carbonate
- Built-in surfactants for maximum efficacy, coverage and rain-fastness
- Multi-site mode of action, enhancing resistance management
- Based on approved food additive, no MRL required
- Short harvest interval
- Compatible with a wide range of botryticides, e.g. Frupica

Multi-site mode of action

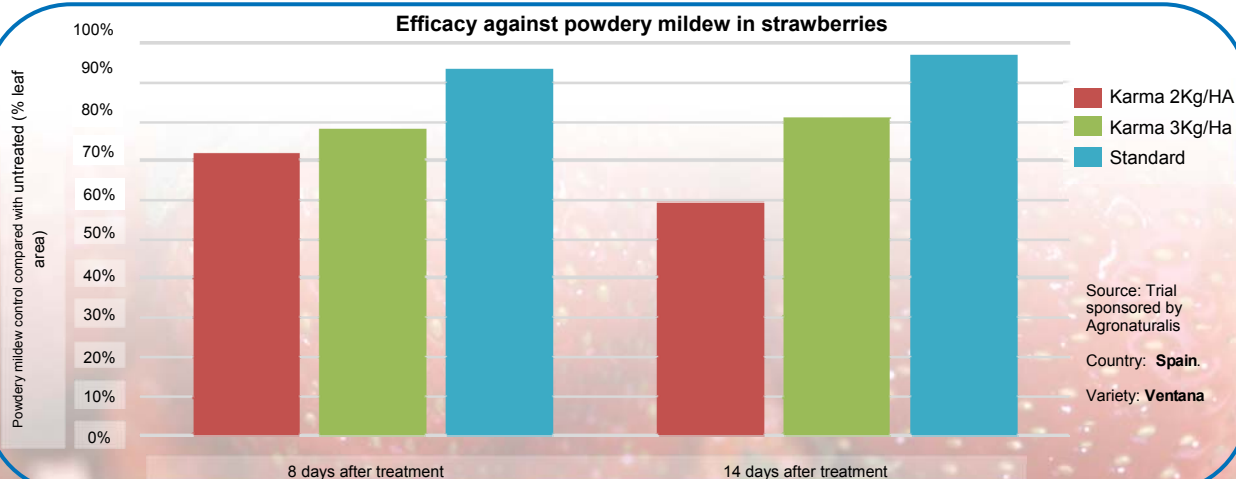

- Karma inhibits mycelial growth and causes total collapse of spores through a combination of dehydration, pH and specific bicarbonate/carbonate ion effects.
- Karma helps prevent infection by disrupting the function of hydrolytic enzymes used by fungi to infect plants.
- Powerful 'wettters and stickers' incorporated into the product ensure that these effects are maximised.

Application

- Application during periods of leaf wetness can optimise the efficacy of Karma.
- Apply at least 600 Litres of water per hectare to achieve thorough coverage.
- For the best results apply preventatively and alternate fungicides with different modes of action in your spray programme.
- Do not apply more than two consecutive application of Karma to ensure crop safety.

Quality Control

Karma is a fully registered plant protection product manufactured to very high quality control specifications. This results in a product of high quality, ensuring maximum efficacy at every application.

| | | | |
|-----------------------------|--|-----------------------|-------|
| Formulation | A water soluble powder (SP) containing 850 g/Kg potassium hydrogen carbonate | | |
| Crops | Strawberries | | |
| Max. Individual Dose | 5 Kg/Ha | | |
| Max No. Applications | 8 per crop | Harvest Period | 1 Day |
| Pack Size | 5 Kg | MAPP No. | 16363 |

USE PLANT PROTECTION PRODUCTS SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
